*The African Experience with Higher Education* - J. F. Ade Ajayi 1996

There have been institutions of higher learning for centuries in Africa, but the phenomenal growth has taken place in the last fifty years, first in the later days of colonialism and then in the heady days of independence and commodity boom. Without them, there would have been no development. The three highly distinguished authors have written the first comprehensive assessment of universities and higher education in Africa south of the Sahara. As can be seen from their biographies, they draw on experience from both francophone and anglophone Africa and from teaching in both the sciences and the arts.

*Wealth, Poverty and Politics* - Thomas Sowell 2016-09-06

In *Wealth, Poverty, and Politics*, Thomas Sowell, one of the foremost conservative public intellectuals in this country, argues that political and ideological struggles have led to dangerous confusion about income inequality in America. Pundits and politically motivated economists trumpet ambiguous statistics and sensational theories while ignoring the true determinant of income inequality: the production of wealth. We cannot properly understand inequality if we focus exclusively on the distribution of wealth and ignore wealth production factors such as geography, demography, and culture. Sowell contends that liberals have a particular interest in misreading the data and chastises them for using income inequality as an argument for the welfare state. Refuting Thomas Piketty, Paul Krugman, and others on the left, Sowell draws on accurate empirical data to show that the inequality is not nearly as extreme or sensational

as we have been led to believe. *Transcending partisanship through a careful examination of data, Wealth, Poverty, and Politics* reveals the truth about the most explosive political issue of our time.

*Emerging Models for Global Health* - Wilfred Ngwa 2016-04-18

In response to the growing global health challenge in the fight against cancer, there is now a greater need for radiation oncology health professionals across institutions to collaborate and be more globally engaged. *Emerging Models for Global Health in Radiation Oncology* is a response to the need for a book that comprehensively covers the important and emerging field of radiation oncology. The recent World Health Organization (WHO) Cancer Report describes the growing global burden of cancer as alarming, a major obstacle to human development and well-being, with a growing annual economic cost of ca. US\$1.16 trillion. The report also highlights major global cancer disparities, and these major disparities in cancer deaths are in part a reflection of poignant underlying differences in radiation oncology services. In parallel with this, there has been a major recent upsurge in radiation oncology global health interest and a common issue expressed at global health summits, seminars,

and symposia is that people want to participate in global health but do not know how. This insightful book highlights the emerging models for global radiation oncology, and serves as a useful resource to facilitate participation and greater effective collaborative global cancer care, research, education, and outreach. It is suitable for researchers, students, health professionals, and anyone interested in the global oncology community.

### **Ensuring Balance in National Policies on Controlled Substances - World Health Organization 2011**

This book provides guidance on policies and legislation with regards to availability, accessibility, affordability and control of medicines made from substances regulated under the international drug control conventions, herein referred to as "controlled medicines". Their scope encompasses "all controlled medicines", but with a specific focus on essential medicines. Controlled medicines play an important role in several areas of medicine, including pain treatment, treatment of opioid dependence, emergency obstetrics, psychiatry and neurology. The availability, accessibility and affordability of controlled medicines are important issues for all countries, but problematic for most of them. The World Health Organization (WHO) promotes governments, civil society and other interested individuals to strive for the maximum public health outcome of policies related to these medicines. WHO considers the public health outcome to be at its maximum (or "balanced") when the optimum is reached between maximizing access for rational medical use and minimizing substance abuse. Policy-makers, academia, civil society and other individuals whose area of work or interest is drug control or public health may potentially work with these guidelines in order to ensure that better use is made of controlled medicines and that more patients benefit from the advantages that their rational use can offer.

### Effects of instrumental materials on student's academic performance. Social studies in selected secondary schools in Nigeria - Kenobi Krukru 2016-09-05

Bachelor Thesis from the year 2015 in the subject Sociology - Children and Youth, grade: 2.1, , course: Adult Education, language: English, abstract: The aim of this study is to find out the effect of instructional materials on students' academic performance in social studies in Etung Local Government Area of Cross River State. The researcher formulated

three research questions to direct the study after a review of relevant and related literature in chapter two. The investigator, in his design, adopted the descriptive survey design which studied samples of both large and small populations to discover the relative incidence. The population of study was JSS two students of 2013/2014 session who were used for the random sampling technique. The instrument for data collection was a fifteen-item questionnaire and information coded therein was analyzed using the simple percentage. From the analysis some results were arrived at and based on the results and findings, recommendations were made: 1. The public should be aware of the uses of instructional materials which will aid in the understanding of social studies; 2. Emphasis must be placed on instructional materials in order to inculcate the spirit of learning social studies; and finally, government and non-governmental agencies should assist in the provision of instructional materials for effective teaching and learning of social studies in secondary schools.

#### **Applications of Random Matrices in Physics**

- Édouard Brezin 2006-07-03

Random matrices are widely and successfully used in physics for almost 60-70 years, beginning with the works of Dyson and Wigner. Although it is an old subject, it is constantly developing into new areas of physics and mathematics. It constitutes now a part of the general culture of a theoretical physicist. Mathematical methods inspired by random matrix theory become more powerful, sophisticated and enjoy rapidly growing applications in physics. Recent examples include the calculation of universal correlations in the mesoscopic system, new applications in disordered and quantum chaotic systems, in combinatorial and growth models, as well as the recent breakthrough, due to the matrix models, in two dimensional gravity and string theory and the non-abelian gauge theories. The book consists of the lectures of the leading specialists and covers rather systematically many of these topics. It can be useful to the specialists in various subjects using random matrices, from PhD students to confirmed scientists.

#### **The Case for Classical Christian Education** - Douglas Wilson 2002-11-12

Newspapers are filled with stories about poorly educated children, ineffective teachers, and cash-strapped school districts. In this greatly expanded treatment of a topic he first dealt with in *Rediscovering the Lost Tools of Learning*, Douglas Wilson proposes an alternative to government-operated school by advocating a return to classical Christian education with its discipline, hard work, and learning geared to child development stages. As an educator, Wilson is well-equipped to diagnose the cause of America's deteriorating school system and to propose remedies for those committed to their children's best interests in education. He maintains that education is essentially religious because it deals with the basic questions about life that require spiritual answers—reading and writing are simply the tools. Offering a review of classical education and the history of this movement, Wilson also reflects on his own involvement in the process of creating educational institutions that embrace that style of learning. He details elements needed in a useful curriculum, including a list of literary classics. Readers will see that classical education offers the best opportunity for academic achievement, character growth, and spiritual education, and that such quality cannot be duplicated in a religiously-neutral environment.

*Orature and Yoruba Riddles* - A. Akinyeme  
2016-02-09

Orature and Yorùbá Riddles takes readers into the hitherto unexplored undercurrents of riddles in Africa. Because of its oral and all too often ephemeral nature, riddles have escaped close scrutiny from scholars. The strength of the Yorùbá as the focus of this study is impressive indeed: a major ethnic group in Africa, with established connections with the black diaspora in North America and the Caribbean; a rich oral and written culture; a large and diverse population; and an integrated rural-urban society. The book is divided into six chapters for readers' convenience. When read in sequence, the book provides a comprehensive, holistic sense of Yorùbá creativity where riddles are concerned. At the same time, the book is conceived in a way that each chapter could be read individually. Therefore, those readers seeking understanding of a specific type of riddle may target a single chapter appearing most relevant to her/his curiosity.

*The impact of continuous assessment on the academic performances of students* - Akeem Adigun 2019-08-08

Seminar paper from the year 2016 in the subject Pedagogy - School System, Educational and School Politics, Ahmadu Bello University (Department of Educational Psychology and Counselling), language: English, abstract: This work explores the impact of continuous assessment on the academic performances of students with the help of a survey that questioned 120 secondary school teachers in Ilorin Metropolis. Over the years, the practice of continuous assessment has been the pre-evaluation process of the academic success of students before their final examination period. Nowadays, however, it appears that teachers are not using continuous assessment to prepare students for examinations. In view of this, the study investigates the impact of continuous assessment regarding the academic performance of students. The descriptive survey design was employed for the study and a random sampling technique was used to select 120 teachers in ten different secondary schools in Ilorin Metropolis. The instrument used was a self-designed questionnaire entitled "Impact of CA Academic Performance Questionnaire (ICAAPQ)". The study reveals that continuous assessment helps students to remember what

has been learnt, to concentrate on difficult areas of a subject, and help to identify their areas of strengths and weaknesses. The author recommends that teachers should work with school counsellors to critically examine students performances in continuous assessment in order to understand their areas of weaknesses.

History of Education in Nigeria - A. Babs Fafunwa 2018-10-03

Originally published in 1974, a comprehensive

history of Nigerian Education, from early times right through to the time of publication, had long been needed by all concerned with Education in Nigeria, students, teachers and educational administrators. No one was better qualified than Professor Fafunwa to provide such a book, and in doing so he gave due emphasis to the beginnings of Education in its three main stages of indigenous, Muslim and Christian Education. Nigerian Education had been considered all too often as a comparatively recent phenomenon, but this book points out from the start that 'Education is as old as Man himself in Africa' and that both Islam and Christianity were comparative newcomers in the field. A historical treatment of these three strands which have combined to make up the modern Educational system was vital to a clear understanding of what was needed for the future, and most of the first half of the book is concerned with these Educational beginnings. The imposing of a foreign colonial system on this framework did not always lead to a happy fusion of the systems, and the successes and the failures are examined in detail. There was no shortage of documentary evidence in the form of reports and statistics during the decades prior to publication, but this evidence was frequently scattered and inaccessible to the student, so that the author's careful selection of key evidence and reports, often drawn from his own personal experience, will be invaluable for those wishing to trace the development of Education in Nigeria up to the early 1970s. A knowledge of the history and development of the Nigerian Education system, of the numerous and intensely varied personalities and beliefs which have combined and often conflicted to shape it, is indispensable to all students in colleges and universities studying to become teachers. It is this knowledge that Professor Fafunwa set out to provide, drawing on his wide experience as teacher writer and educationalist.
