It's Different for Daughters - Ruth Fry 1985

This study of the curriculum for girls from the beginning of this century brings a fresh perspective to New Zealand educational history. Following the early triumphs of gaining the vote (and the right to qualify for university degrees), progress in women's education was not always straightforward. Social attitudes and provisions for girls at state schools in the first quarter-century established patterns for later generations to inherit and modify. In some areas, such as science and mathematics, inequalities for Maori girls lingered. Using a wide range of resources, ruth Fry traces the origin and development of the curriculum for girls to 1975, International Women's year. Those who, in 1893, achieved success in their campaign for equal voting rights were also concerned about educational opportunities for women. NZCER is very pleased to reissue It's different for daughters to celebrate the Centenary of Women's Suffrage in New Zealand.

Media, Technology and Society - Brian Winston 2002-09-11

Challenging the popular myth of a present-day 'information revolution', Media Technology and Society is essential reading for anyone interested in the social impact of technological change. Winston argues that the development of new media forms, from the telegraph and the telephone to computers, satellite and virtual reality, is the product of a constant play-off between social necessity and suppression: the unwritten law by which new technologies are introduced into society only insofar as their disruptive potential is limited.

Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles - National Research Council 2015-09-28

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA)

Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

[Hell's Angels](#) - Hunter S. Thompson 2012-08-01

Gonzo journalist and literary roustabout Hunter S. Thompson flies with the angels—Hell's Angels, that is—in this short work of nonfiction. "California, Labor Day weekend . . . early, with ocean fog still in the streets, outlaw motorcyclists wearing chains, shades and greasy Levis roll out from damp garages, all-night diners and cast-off one-night pads in Frisco, Hollywood, Berdoo and East Oakland, heading for the Monterey peninsula, north of Big Sur. . . The Menace is loose again." Thus begins Hunter S. Thompson's vivid account of his experiences with California's most notorious motorcycle gang, the Hell's Angels. In the mid-1960s, Thompson spent almost two years living with the controversial Angels, cycling up and down the coast, reveling in the anarchic spirit of their clan, and, as befits their name, raising hell. His book successfully captures a singular moment in American history, when the biker lifestyle was first defined, and when such countercultural movements were electrifying and horrifying America. Thompson, the creator of Gonzo journalism, writes with his usual bravado, energy, and brutal honesty, and with a nuanced and incisive eye; as The New Yorker pointed out, "For all its uninhibited and sardonic humor, Thompson's book is a thoughtful piece of work." As illuminating now as when originally published in 1967, Hell's Angels is a gripping portrait, and the best account we have of the truth behind an American legend.

Before the State - Andreas Osiander 2007-12-06

The idea that society, or civilisation, is predicated on the "state" is a projection of present-day political ideology into the past. Nothing akin to what we call the "state" existed before the 19th century: it is a recent invention and the assumption that it is timeless, necessary for society, is simply part of its legitimating myth. The development, over the past three millennia, of the political structures of western civilisation is shown here to have been a succession of individual, unrepeatable stages: what links them is not that every period re-enacts the "state" in a different guise - that is, re-enacts the same basic pattern - but that one period-specific pattern evolves into the next in a path-dependent process. Treating western civilisation as a single political system, the book charts systemic structural change from the origins of western civilisation in the pre-Christian Greek world to about 1800, when the onset of industrialisation began to create the conditions in which the state as we know it could function. It explains structural change in terms of both the political ideas of each period and in terms of the material constraints and opportunities (e.g. ecological and technological factors) that impacted on those ideas and which constitute a major cause of change. However, although material factors are important, ultimately it is the ideas that count - and indeed the words with which they were communicated when

they were current: since political structures only exist in people's heads, to understand past political structures it is imperative to deal with them literally on their own terms, to take those terms seriously. Relabelling or redefining political units (for example by calling them "states" or equating them with "states") when those who lived (in) them thought of them as something else entirely imposes a false uniformity on the past. The dead will not object because they cannot: this book tries to make their voices heard again, through the texts that they left but whose political terminology, and often whose finer points, are commonly ignored in an unconscious effort to make the past fit our standard state-centric political paradigm.

Marine Diesel Engines - Nigel Calder 2003

Nigel Calder, a diesel mechanic for more than 25 years, is also a boatbuilder, cabinetmaker, and machinist. He and his wife built their own cruising sailboat, Nada, a project they completed in 1984. Calder is author of numerous articles for *Yachting Monthly* and many other magazines worldwide, as well as the bestselling *Boatowner's Practical and Technical Cruising Manual* and *Boatowner's Mechanical and Electrical Manual*, both published by Adlard Coles Nautical. Here, in this goldmine of a book, is everything the reader needs to keep their diesel engine running cleanly and efficiently. It explains how diesel engines work, defines new terms, and lifts the veil of mystery that surrounds such engines. Clear and logical, this extensively illustrated guide will enable the reader to be their own diesel mechanic. As Nigel Calder says: 'there

is no reason for a boatowner not to have a troublefree relationship with a diesel engine. All one needs is to set the engine up correctly in the first place, to pay attention to routine maintenance, to have the knowledge to spot early warning signs of impending trouble, and to have the ability to correct small ones before they become large ones.'
