Oncology Massage - Penny 2021-04-15

In Oncology Massage - an integrative approach to cancer care the authors have created a textbook which will provide both experienced and inexperienced therapists with a resource to expand their knowledge and understanding of working with people with

cancer. Cancer occurrence and survivorship are now so common that every massage therapist will at some time work with clients who have been through cancer treatment. The short and long-term effects of biomedical cancer treatment require massage therapy adaptations to pressure, site, position and duration to provide safe and effective treatments. Informed massage therapists can support the body to promote overall wellness as well as identify the underlying secondary effects of cancer treatment that contribute to physical dysfunction. Oncology Massage: An Integrative Approach to Cancer Care provides massage therapists with essential information for: Treatment planning based on the physiology of cancer and cancer treatments Critical, thoughtful treatment decision making Consideration of the psychosocial effects of cancer Enhancing therapist self-awareness and building a therapeutic relationship. The information is presented in a

clear and simple format with plentiful use of illustrations and information boxes which allows it to be used both as a learning tool for those new to the field of oncology massage and as a resource for quick referral when working with new patients. The techniques of massage therapy change very little; it is the knowledge and understanding of their use that distinguishes a massage therapist. Oncology Massage is unusual in that it includes contributions not only from a range of experienced practitioners but also from people with cancer who have received massage during and after cancer treatment. This feedback from clients provides an invaluable addition to the understanding of how massage can be used as a safe and effective part of cancer care.

The Princess Pen Course Manual- No Needle Filler -

Downloaded from
blog.dreamhotels.com on
by guest

Deborah Jay Kelly 2020-03-25
This is a revolutionary system which allows the insertion of a Dermal Filler without the need for a needle/injection. It is a form of needle free mesotherapy applied using a specialised hand held pen for insertion. A Hylauronic Acid Filler is used in the hand held pen and is inserted into the Epidermis and Superficially into the top of the Dermal Layer depending on the depth of application. HA is naturally occurring in our body and as we age this depletes. With the use of the Pen we can improve and delay the visual effects of ageing. Using 0.5ml to 1ml of HA we can help to smooth out superficial fine lines and wrinkles and add volume to lips. WHY USE THE PRINCESS PEN Many people have a phobia of needles and this may in the past have led them to have drastic cosmetic procedures. Every Patient has a pain threshold and the insertion of Injectable Dermal Filler can be extremely painful. The use of Lidocane, Emla or a Dental Block can be used to

control this pain but an injectable HA filler application is always at the least uncomfortable. A Hyaluron Pen application is mostly pain free and the results are instant and can be amazing. This treatment is not new and has been around since 2000 during which time it has been in continued development. Once the treatment is applied the Hylauronic Filler which is liquid becomes pliable and can spread quickly throughout the area. This gives more scope than the traditional method of injecting. It is a much safer way to insert Filler with little if any major side effects such as 'allergic reaction' 'migration' 'blood vessel intrusion' and 'scarring' WHY DO CLIENTS ASK FOR A PRINCESS PEN TREATMENT The popularity of the Princess Pen among clients is primarily due to their benefits, some of which include: Reduction of age-related volume loss on the face, which causes a drooping appearance Reduction of nasolabial folds (The folds that form at the side of the nose and

run down towards the side of the lips) Restoration of skin firmness Improvement of skin texture and appearance Reduction of wrinkles and fine lines Enhancement of facial symmetry (Frampton, 2010) Increased definition of the lips

SELECTION OF THE PATIENT

The most common candidates for princess pen procedures are patients with aging skin. These procedures are usually done to even out wrinkles and static lines (such as marionette lines and nasolabial folds), more so in the lower two-thirds of the patient's face. They can also be carried out to achieve facial contouring and augmentation, as is usually the case for lip enhancement. The practitioners should always set the expectation in the patient that dermal fillers will strictly serve to reduce wrinkles and lines rather than remove them, and while it is possible to achieve slight improvements in contours, but will not produce surgery-like outcomes. Patients who have too many wrinkles,

and skin laxity might need surgical procedures for marked improvements. It is important to note that patient who exhibits body dysmorphic disorder, depression, narcissism, or those with impractical or unattainable expectations are not candidates for dermal fillers as these patients are predisposed to unhappiness and dissatisfaction (Ferneck and Bennett 2018).
