express a vector in polar form precalculus varsity tutors

explanation first it could be helpful to draw the vector so that we can get a sense of what it looks like the component form means from the start to the end it moves forward 2 and down 7 we can now use the pythagorean theorem to solve for the magnitude

how to find the equation of a perpendicular line act math

explanation the slope of m is equal to $y_2 - y_1 / x_2 - x_1$ $2 / 4 - 5 / 1 - 2$ since line p is perpendicular to line m this means that the products of the slopes of p and m must be -1 slope of $p = 1 / 2$ slope of $p = 2$ so we must choose the equation that has a slope of $1/2$ if we rewrite the equations in point slope form $y - y_1 = m(x - x_1)$ we see that the equation $2x - y = 3$

how to find out if lines are perpendicular act math varsity tutors

explanation when determining if a two lines are perpendicular we are only concerned about their slopes consider the basic equation of a line where m is the slope of the line two lines are perpendicular to each other if one slope is the negative and reciprocal of the other
